

GUARD TOUR SYSTEMS

Morse Watchmans, the most recognized name in security management products and the innovators of the original The Boss®, brings to you PowerCheck, an easy to use, durable, computerized guard tour system. It is designed to prevent costly losses such as vandalism, theft, corporate espionage and damaging accidents throughout your facility. This system allows you to make sure your officers are making the rounds and will provide you with back-up documentation. PowerCheck gives you the most functional and effortless guard tour system your money can buy. Best of all, Morse Watchmans offers you industry-leading warranties and exclusive lifetime support for the PowerCheck Guard Tour System.

THE ALL-IN-ONE, HAND-HELD DATA RECORDER

As officers make their rounds, they have the ability to enter in a user-programmable incident code on the hand-held data recorder's keypad. This cuts out any unnecessary paperwork for you and your officers. PowerCheck's sophisticated system features Auto Pilot and Random Tour commands for added convenience and surveillance. PowerCheck's hand-held data recorder is engineered to be lightweight and sleek in design, making the unit easy for your officers to carry and handle. It is simple to use, completely self-contained, and extremely durable. PowerCheck's shock- and water-resistant data recorder has a resilient outer shell made from Lexan®. It will function in temperatures ranging from -40° to 140°. The data recorder has a rechargeable battery and comes complete with a recharging base unit.

CHECKPOINT STATIONS THAT ARE GUARANTEED FOR LIFE

Everything you ever worried about before with other guard tour systems is absolutely accounted for with PowerCheck. Like the data recorders, the checkpoint stations boast an extremely durable construction. Unlike other "button" systems, these will withstand rough usage. And they won't fade in the sun or fail in the rain like those "barcode" systems. Even if its surface has been vandalized, the stations will still be able to function.

TOUR-PRO™

GUARD TOUR SOFTWARE

Reporting for duty — TOUR-PRO GUARD TOUR SOFTWARE

Morse Watchmans has designed and developed Tour-Pro Guard Tour Software to offer you extended functionality for your Guard Tour System. This unique software allows you to download tour information, program the data recorder, generate custom reports and manage files using one simple program. It converts stored data from your officers' tours into useful, detailed, printable reports. By choosing a fixed or variable set of criteria, you may customize the reports by time, day, week and month for numerous types of transactions. Tour-Pro is engineered to integrate with a Morse Watchmans Guard Tour data recorder by a direct connection, modem or TCP/IP network connection. The upgrade to TCP/IP capabilities allows system managers to administer data recorders from multiple locations through an existing LAN (Local Area Network).

Know what, where and when things happen — SECURITY MANAGERS WORLDWIDE TRUST POWERCHECK

Morse Watchmans, world leaders in security management products, developed the PowerCheck system specifically to revolutionize the effectiveness of guard tours.
