SPOTLIGHT ON SUCCESS

A MORSE WATCHMANS CASE STUDY

Monroe County, FL Sheriff's Office

COMPANY PROFILE

Monroe County is the southernmost county in Florida and the United States. It is made up of the Florida Keys and portions of the Everglades National Park and Big Cypress National Preserve. These parks are mostly uninhabited mainland areas while the Florida Keys are a string of islands connected by U.S. Highway 1 which ends in Key West, 150 miles southwest of Miami. The Monroe County Sheriff's Office, in addition to providing law enforcement service to the area, is responsible for three detention facilities

which are located in Key West, Marathon and Plantation Key. The main facility is located in Key West and has a capacity of 597 beds. There is a 57 bed facility in Marathon and a 46 bed facility in Plantation Key.

TECHNOLOGY OBJECTIVE

Because of the nature of the facilities, it is imperative that there be absolute key control and accountability. It is also essential that the access procedures already in place be strengthened by an automated key management system.

THE CHALLENGE

Detention facilities are a highly structured environment so that security, safety and order can be maintained among the populace. Security procedures are clearly defined and include among others, head counts, inmate movements, visitor logs and cell inspections. Among the most closely guarded and stringent policies and procedures however is key control. Regulations state that staff is not permitted to discuss key control with anyone except duly authorized personnel and only outside the presence and hearing of inmates. In addition, policy states that each facility shall have a key control system that includes the absolute control of keys by the staff, key issuance records and a system which ensures

that missing keys are immediately identified.

MORSE WATCHMAN SOLUTION

KeyWatcher® Key Control System – By releasing assigned keys only to users with the proper authorization code, the KeyWatcher system helps to ensure

adherence to established policies and procedures. Using minimal wall space, the key storage cabinet eliminates outdated lock

"Since we installed the KeyWatcher® system from Morse Watchmans, we no longer waste time trying to determine who last had a set of keys."

boxes, unreliable manual logs and messy key identification tags. It also records the access history of each key, including

software delivers real-time polling transactions, status, alarm and reporting capabilities for the KeyWatcher system.

detention facilities. The KeyWatcher controls access to the keys and keys are tracked while in use, including times and

user names. Staff is assigned various levels of access to the keys to help maintain effective key control and guard against carelessness or oversight.

KEYWATCHER FEATURES

- *Illuminated key storage*
- *Advanced network capabilities*
- *Real time transaction polling*
- *Centralized programming*
- *Up to 2,000 user codes*
- *Biometric access option*
- *Secure single-key access*
- *Secure card slot and locker options*
- *Tamper-proof mechanisms*
- *Secure storage for up to 2,000 keys*

KEYPRO PERFORMANCE SOFTWARE

- *Extensive and detailed reporting options*
- *Centralized programming*
- *Advanced network capabilities*
- *Real-time transaction screens and polling*
- *Notification alerts*

user, date and time of checkout/ return. Constructed of rugged stainless steel, the illuminated key storage system is designed to resist abuse and is alarm-protected against tampering.

KeyPro® Performance Software – The user-friendly PC application

Activity reports can be customized to trace key movements by time, date and user code or biometric access data.

IN ACTION

The KeyWatcher Key Control System, complete with the fingerprint access control option, was selected by the Monroe County Sheriff's Office for installation in all three
