

KeyWatcher® TOUCH

Gallagher Command Centre Integration Module

The KeyWatcher Touch Gallagher Command Centre Integration software allows the user to give access to KW Touch assets to command Centre card holders. Users for the KW Touch are added through the Command Centre software making it simple to integrate users between the systems. Command Centre card holders will be automatically given access to permissions, access groups, and other features using the KW Touch profiles. This eliminates the need for programming users on the KW Touch that are already on the Command Centre system.

Gallagher Command Centre Integration Supports:

- Add/Modify/Delete Cardholders from the KeyWatcher using the Command Centre Cardholder's Add/Mod/Deletes.
- Add/Modify/Delete Badge data from Cardholder to the appropriate KeyWatcher User.
- Assign KeyWatcher Users to KeyWatcher Sites based on their Command Centre access groups.
- Associate KeyWatcher Site Profiles to Command Centre access groups.
- Configure which KeyWatcher TrueTouch alarms and transactions that get passed to Command Centre via events and alarms.
- Configure Card Format used with Command Centre to pass correct badge data to the KeyWatcher TrueTouch Server.

Requires:

- Gallagher Command Centre V 7.50
- Gallagher Read Only Use
- Gallagher Cardholder Change Tracking API
- Gallagher FTCAPI

Morse Watchman's – Making your transition to KW Touch with Gallagher Command Centre simple!
