KeyWatcher® Illuminated

taking today's keys into tomorrow

The KeyWatcher Illuminated® is an electronic key control solution that operates as a stand-alone system and is also designed for interoperability with access control and business systems. Always stay in command of who has permission to access the key cabinet and keys with the KeyWatcher Illuminated. The KeyPro III™ software's communication capabilities instantly show who removed keys and when they were taken out. The modular design allows configuration of the exact components needed, like key slots, card slots, and lockers, with the ability to change modules or expand the system as needs grow and change.
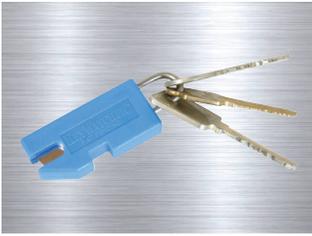

KeyWatcher® Illuminated Alarms can be programmed to sound and alerts can be sent automatically via email to designated managers when keys are overdue. The KeyWatcher Illuminated is powered by the same AC electricity available from your wall outlet, features an emergency 48-hour back-up battery, and has a built-in RS-232 communications port for direct connectivity via ethernet.

There's a built-in keypad and up to 2,000 assignable user codes with PINs. The illuminated screen clearly displays messages and user prompts for a variety of functions and ease of use. The rugged stainless steel cabinet resists wear and is wired with a tamper-proof mechanism.

MORSE WATCHMANS

the integrated access control solution

SmartKeys
Our patented SmartKeys track users and movements with an identification chip.

16-Key Module
Holds the largest number of keys.

KeyPro III™ Software
Enhances programming and reporting. Email alerts track SmartKeys.
